**Blockchain Wallet Messenger App**

# Banking Without Banks

The BullionBlock Wallet Messenger App Payments Gateway enables people worldwide with access to a smart phone to finally have autonomous control over their finances in the palms of their hands

Our mobile financial solutions enable global remittances, online mobile payments, merchant payments and peer-to-peer transactions.

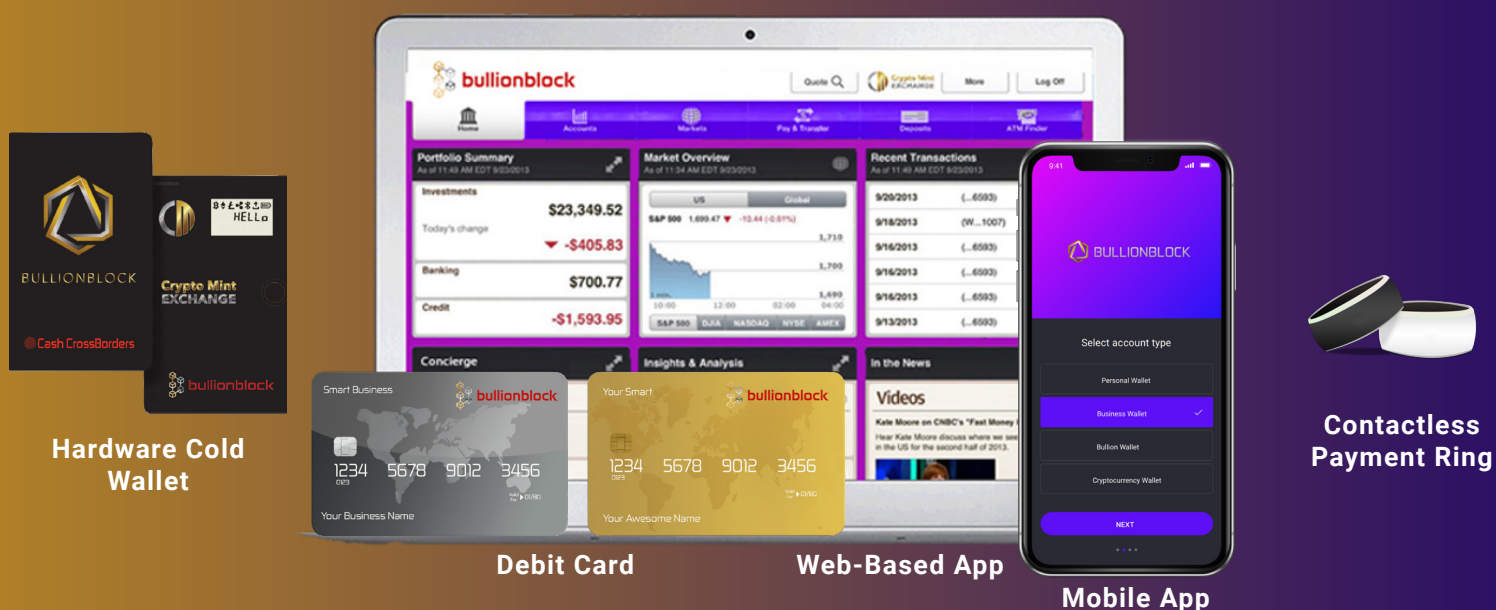

Unlike traditional financial institutions, the Bullionblock global digital transactions are fast, frictionless, low-cost, and secured by blockchain technology – free of third-party intervention.

BullionBlock aims to provide a world-first mobile wealth-preservation Wallet Messenger App that protects the currency balance against inflation and the volatile financial system with gold and silver bullion.

Through its powerful, real-time, Cloud Based platform, its extensive experience within the Crypto world, the use of QR Payments and adoption of Peer-to-Peer, the BullionBlock CashCrossBorders platform can bring the Blockchain vision to life outside of the requirement for traditional Payments schemes

Traditional banking infrastructure was not designed to manage the conversion of cryptocurrencies. Therefore, there was a clear market opportunity for a fintech company to create such an offering.

# Blockchain Mobile Financial Services

The BullionBlock technology will enable global money transfers to be a lot quicker and cheaper than what is currently on offer in the market today, with lower error rates and lower vulnerability to cyber threats.

The BULLIONBLOCK platform moves money directly between people and businesses as easily as email, providing more access and autonomy for individuals over their money, lower costs for money transfers and increased revenue for businesses.

As a unifying layer between all payments and currencies, the BULLIONBLOCK ecosystem can link siloed financial institutions and services and reduce the friction that contributes to higher fees. This interoperability substantially lowers global remittance costs by making transactions that cross national boundaries much more efficient.

BULLIONBLOCK is an effective Payments Gateway that is easy to use, fast, low cost and accessible to everyone worldwide from any device.

The BULLIONBLOCK platform can be used for B2B (business-to-business) payments by small and medium-sized (SME) businesses processing local and/or international financial transactions.

Also, BULLIONBLOCK benefits B2E (business-to-employee) and G2C (government-to-consumer) by reducing remittance fees, payroll costs, and error rates.

The Blockchain Powered Chat Wallet is a seamless Messenger App which can handle millions of concurrent chat users, with almost all chat features available on Whatsapp and Telegram combined.

# Borderless Wallet Platform

The non-custodial customer-centric BULLIONBLOCK Wallet Messenger App is a borderless inclusive transparent mobile digital payments gateway supported by our worldwide multi-channel network – enabling 24/7 accessible control over personal and business financial transaction that is unrivalled.

BULLIONBLOCK will operate two highly secure and easy to use payments gateway services to the world market, namely the **CashCrossBorders.com** brand on the banking rails, and the **BullionBlock.cash** brand which will offer bullion-backed money-preservation Wallet account operating on the company blockchain technology platform.

The company business plan has a 2 stage rollout go-to-market strategy covering the UK / EU (EEA), USA, Hong Kong and Australia.

The Global Payments Market is expected to reach US\$2 Trillion by 2025

## Financial Freedom App

We use decentralized Blockchain Technology to create new ways to manage money, send and receive money, buy, sell and pay bills.

## Technology-based Solutions

Our FinTech Platform enables agility, efficiency and accuracy by using operational advancements through robotic process automation (RPA), Distributed Ledger Technology (DLT) and application programming interfaces (APIs).
